DETAILED ACTION

Allowable Subject Matter

Claims 1-7 are allowed in view of the prior art.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken either alone or in combination, fails to disclose or render obvious an apparatus for use in rotational measurement, the apparatus comprising a rotational assembly that rotates about a rotational axis; at least two interferometers that each direct a measurement beam to the rotational assembly and receives a returned beam back from the assembly; with the assembly comprising a plurality of cube corners mounted so that at least one of the corners is able to receive and reflect to an interferometer a respective measuring beam as the assembly rotates about its rotational axis; with the interferometers combining a reference beam with the received measurement beam into a detection beam that includes an interference signal, thereby permitting rotational measurement of the assembly and any attached work piece target based on processing of the interference signal, in combination with the rest of the limitations of the above claim.

As to claim 5, the prior art of record, taken either alone or in combination, fails to disclose or render obvious a method to measure rotation in a full circle of a target object, the method comprising, among other essential method steps, placing a rotary assembly of multiple cube corner pairs distributed evenly over the full circle; combining measurement laser beams reflected from corner pairs in the circle and reference laser beams to obtain at least one detection beam indicating an interference signal, and processing the interference signal to determine rotation of the target object, in combination with the rest of the limitations of the above claim.
